# Why Bondor uses CodeMark?

CodeMark provides a method for verifying that a building product meets the nominated requirements of the Building Code of Australia (BCA).

Our products are not only made in Australia for Australia by they are independently assessed by Australia's third-party accreditation scheme, CodeMark.

**CodeMark Certificate offers**

- Increased consumer confidence,

- Guaranteed legislative acceptance by building authorities,

- A timesaving consent and inspection process,

- A clear demonstration the product meets mandatory compliance requirements

## Bondor supports Australian testing to Australian Standards in Australian conditions.

In order for a product to gain CodeMark™ accreditation a number of assessments are carried out by the independent third party assessors, these include:

- Audits of the Manufacturing facility,

- Audits of any identified Critical Components,

- Installation and Construction Site Audits,

- Review of Technical Documentation & CodeMark Certificate by an Unrestricted Building Certifier (UBC),

- Suppliers Declarations, Technical Specifications & Supply Chain control,

The integrity of the scheme is guaranteed by regulatory oversight by ABCB & JAS-ANZ (The Joint Accreditation System of Australia and New Zealand).

**Bondor Products have been CodeMark certified since 2013. We have the largest range of Certificates of Conformance in our industry covering insulated panels for walling and roofing profiles in both residential and commercial applications.**

These can be sourced at JAS-ANZ website as well as www.bondor.com.au
